About me

I'm a UX / Product Designer and a Data Visualiser. I love to explore the intersection of various technologies and human contexts including IOT, Augmented Reality and Virtual Reality and engage in learning new tools and technologies. I work on - grounding myself in understanding, gaining perspective, embracing the collaborative process, finding ways to test multiple ideas and iterating - to arrive at the most effective and practicable solutions. Outside of work I enjoy spend time with my friends and travelling.
